

SOLVENT RECYCLING EQUIPMENT

LS Series options

Vacuum Attachments

Vacuum attachment for LS55 shown here

Description:

JetVac is used to create a vacuum within the distillation unit. It can be used for all LS models; allows safe processing of solvents with boiling points up to 500° F.

Little Cooler Option

Description:

A self-contained water/glycol recirculation system to provide a closed loop water supply to the condenser, saving on water consumption and maintenance.

System II Lid

Description:

Allows user to retrofit standard LS15/15E unit to use top fill option. Has sight glass to view fill process.

Stainless Steel Condensers

Description:

316 stainless steel shell and tube for demanding or very high purity applications.

Stilbags / Stilpan

Description:

Convenient bag or pan option to remove residue with minimal operator contact. Helps maintain the long term efficiency of the LS equipment.

Drum Pump and TopFill option

Description (Drum Pump):

316 stainless steel drum pump with either air or electric explosionproof motor. Ideal for pumping flammable and non-flammable solvents.

Description (TopFill Option):

Connects pump to System II Lid allowing user to manually fill the LS15/55IIE with lid shut. Reduces exposure to hazardous vapors.

NEET Timer

Description:
Non-explosionproof electric timer (24hr.) terminates distillation process automatically. Must be installed outside the hazardous area.

Standard Diameter Insert

Description:
Non-stick coated insert can be used with older units in which the coating has become damaged. Must use heat transfer oil with insert.

Scrapers

Description:
Scrapers are for removal of hardened residue. Solvent resistant, non-sparking, non-abrasive material will not harm non-stick coated surfaces.

Chillers

FTI offers chiller packages for the LS-JrE, LS15E, LS55E.

Description:
Chiller provides refrigerated recirculating fluid for vapor condensing.
