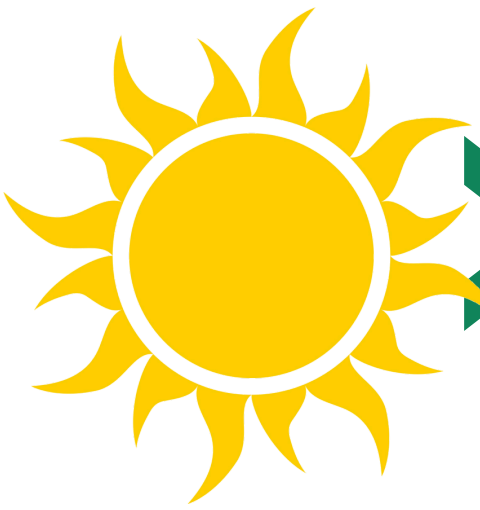
PUMPED UP FOR CLEAN ENERGY

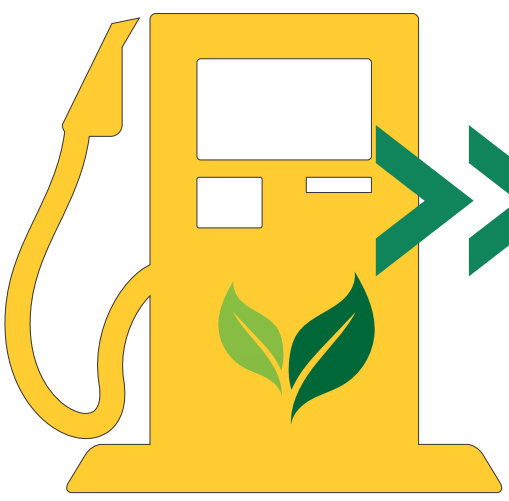


SOLAR

- Accounts for 33% of renewable energy globally
- 3.2 million U.S. homes have solar panels

WIND

- The U.S. ranks second in global wind power capacity
- More than 90,000 wind turbines are installed across all 50 U.S. states
- By 2030, 20% of U.S. electricity could be provided by wind



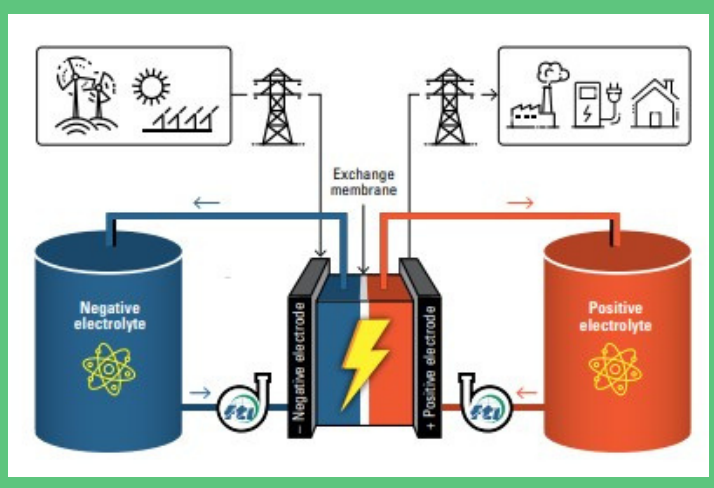
BIOFUELS

- **Biodiesel** is made from oils such as soybean or animal fat
- **Biodiesel** is 75% cleaner than regular diesel
- **Ethanol** is produced primarily from corn and sugar cane
- **Ethanol** is added to gasoline to allow the fuel to burn more completely

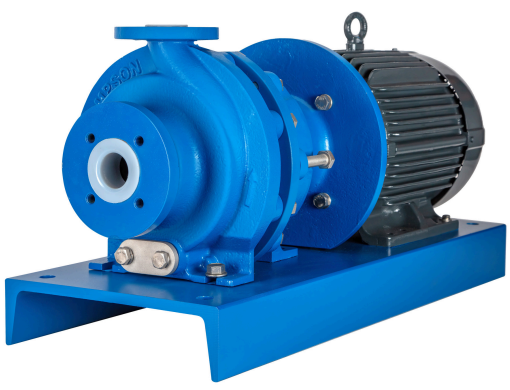
FLOW BATTERIES

Flow batteries store renewable electricity in liquid electrolytes for on-demand use.

Mag-drive centrifugal pumps move these electrolytes in the smooth, pulseless flow needed for optimal flow battery function.



PUMPS FUEL CLEAN ENERGY



- Coolant for wind turbines
- Fume scrubbers for solar panel manufacturing
- Transfer corrosive chemicals for biofuel production
- Liquid electrolyte for flow batteries
